

Deter. Detect. Delay

Powerful Intruder Deterrence. Total Peace of Mind.

The D3 Sound Shield is Texecom's latest internal security sounder, engineered to stop intruders in their tracks. The D3 Sound Shield emits a uniquely powerful and disorientating signal that is almost impossible to tolerate or locate. This overwhelming sensory impact forces intruders to retreat immediately - buying critical minutes until help arrives.

Key Features & Benefits:

- **High-Intensity, Disruptive Sound Output:** Broadcasts a powerful 125 dB(A) signal, with user-selectable output levels, delivering immediate and overwhelming discomfort that forces intruders to leave.
- **Dynamic Multi-Tone Defence:** Uses a rapidly oscillating four-tone signal (2–5 kHz range) that overwhelms the brain's ability to filter sound, making it impossible for intruders to remain in the protected area.
- **Reliable, Self-Contained Protection:** Integrated 1.8 Ah backup battery provides up to 30 minutes of alarm operation during power loss, supported by automatic battery health checking.
- **Installer-Friendly Deployment:** Compact, retrofit-ready design with flexible series or parallel installation options, enabling rapid upgrades and full coverage across larger or complex premises.

Sound Safety

- **Independently Tested**

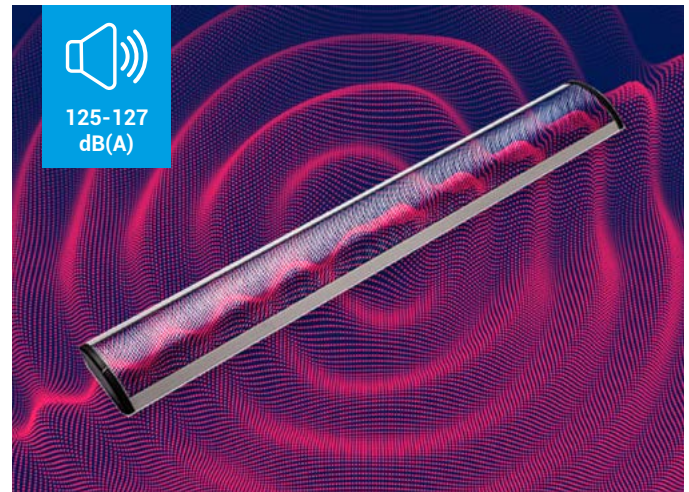

Evaluated by the Royal Institute of Technology in Stockholm (Technical Acoustics), confirming no lasting physical effects from exposure.

- **Compliant with International Safety Limits**

The sound output remains below the 140 dB peak limit set by recognised occupational health and safety regulations.

- **Temporary, Non-Harmful Effects**

Any discomfort or disorientation immediately subsides as soon as the sound stops, ensuring the product delivers strong deterrence without long-term

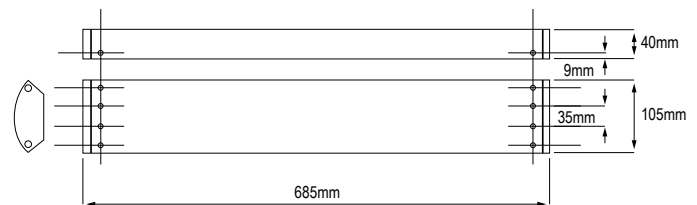

Installer Advantages

- **Flexible system integration:** Works with existing security systems and can replace or run alongside standard alarm sirens.
- **Simple, fast installation:** Compact design, straightforward wiring and easy on-site setup save time on both new fits and retrofits.
- **Adaptable coverage options:** Multiple units can be arranged on walls or ceilings to protect larger or awkward-shaped areas.
- **Low maintenance requirements:** Clear status indication and a long-life backup battery make ongoing servicing quick and predictable.

Applications

- **Retail & Commercial Units:** Rapid intruder ejection and strong deterrence for stock rooms and shop floors.
- **Offices & Business Premises:** Ideal for protecting internal zones outside working hours.
- **Healthcare & Public-Facing Environments:** Disrupts aggressive behaviour and supports staff safety.
- **High-Value Storage Areas:** Server rooms, cash offices, and stock rooms needing immediate area denial.
- **Residential High-Value Properties:** Adds a powerful extra layer of protection beyond standard alarms.
